Sizing Chart and Flow Graph (Maximum Flow Rate)

Sizing Example

For a primary pressure of 10 barg, a set pressure of 4 barg, and a maximum saturated steam flow rate of 400 kg/h, or air flow rate of 400 m³/h, select an appropriate size.

Locate point A, where the primary pressure (P₁ = 10 barg) intersects the set pressure (P₂ = 4 barg). Move straight down from point A until reaching a size with a rated flow rate exceeding the desired flow rate. This first occurs at point B on the DN 25 flow rate line.

- The DN 25 size should be selected.

- For a set pressure of 4 barg, model PN-DR-6 should be selected (see the adjustable pressure range information in the specifications overleaf).
